

NOTE: This burndown chart contained the story points for ALL cards in the product backlog. Sprint 2 did not have 230 points.

Since there was no burndown chart available for sprint 1, there is nothing to compare with the sprint 2 burndown chart. From what is shown, the velocity of the graph is slow, with a higher velocity towards the end of the sprint. The reasoning was due to people taking time off for reading week as well as most stories being marked as done only after testing them combined with other stories.
