

## Sprint 4 Schedule

Critical path is marked in red. The square brackets indicated the rough amount of hours spent on each ticket. Since this was the final sprint, there were a handful of tasks we needed to implement in a certain order, hence the shape/size of the above diagram.

Our goal this sprint was to finish off any features that needed to be completed for the presentation, focusing on buy/rent checkout (CAR-11, CAR-12), as we can iron out the bugs before the presentation. There weren't that many features left to implement, but these few weeks were especially busy and the term test was around the corner. We learned not to overestimate too much from the previous sprints, so it ended up being the perfect amount of work to fit into the sprint and quite manageable. While we weren't able to get to many 'bonus features', I think we're happy with the overall state of the application and how this sprint was scheduled.
