# Sprint 2 Schedule

Critical path is marked in red, while the dashed path indicates future paths/dependencies. A black path is an element we weren't able to finish, that we planned on finishing this sprint. The square brackets indicated the rough amount of hours spent on each ticket.

Our sprint is generally planned out at the start meeting of the overarching goal we want to accomplish in the first meeting of the sprint. We then take on all the tasks that we can

in order to fit that goal and then reconsider later if we have taken on too much for the sprint. We finish the backend functionalities first (eg. CAR-40, CAR-39, CAR-5, CAr-19, CAR-21, CAR-41), so the group members working on the frontend have the ability to send the relevant HTTP request to the backend as well as use Postman to fix bugs more easily. We had too many large frontend tickets this sprint, hence why CAR-5 isn't fully completed. We're planning on finishing most of the backend of the app earlier on in the sprint, so everyone focuses on the frontend during the last stretch of the sprint.
