## Sprint 3 Schedule

Critical path is marked in red. The dashed path indicates cards in the future we need to complete in the next sprint or a deviation that could have occurred as opposed to the critical path. The square brackets indicated the rough amount of hours spent on each ticket.

This sprint our goal was to complete the full functionality of the website, without any additional bonus features, such as liking listings or reviews for example. Much like last sprint, we focused on the backend functionality early on in the sprint (CAR-12, CAR-13, CAR-21, CAR-48), then followed it up with the respective frontend tasks. Many of us were busy during this sprint due to the semester timing with midterms/assignments, but the backend functionality is almost at completion and the frontend portion for buy listings had significant progress (CAR-27, CAR-11). Work still needs to be done on the rent listing side of the app. This sprint further demonstrated how time consuming the

frontend is to design, so with most of the backend finished, ideally most if not all the members can help implement, finish and polish the frontend functionality next sprint.
